Bachelor of Engineering Software Engineering
(Second Class Upper)
Colombo 06

Experience

Software Engineer Intern — 2024 - 2025
Hsenid Software Lanka, Borella

Full-stack software developer skilled in Flutter, Angular, Spring Boot, and database systems, with hands-on experience in designing, developing, testing, and optimising web and mobile applications. Experienced in developing REST APIs, integrating databases and third-party services, and deploying applications to production environments. Familiar with publishing and maintaining mobile applications for Android and iOS, as well as deploying web applications. Strong understanding of the software development lifecycle, with practical experience building reliable and user-focused solutions.

Projects

Crisis360 - Risk Predictor App with NLP

Crisis360 is a mobile-based disaster management system that enables real-time safety confirmation, SOS alerts, and hazard mapping using AI-driven insights. It improves communication between civilians and emergency services to ensure faster response and safer communities .

Github Link

MoneyGone – Expense Tracker App

Flutter, Firebase, GetX — Developed a cross-platform expense tracking app for Android and iOS with Firebase Authentication and Firestore CRUD, featuring expense management, category and date filtering, monthly summaries, charts, dark mode, and a responsive user interface.

Github Link

Yoga Master

A MERN stack yoga website developed to help users explore yoga programs, book sessions, and follow wellness routines online. It provides a simple platform for managing classes, instructors, and user progress in one place.

Github Link

HappyPaws

A MERN stack project designed to help manage pet animal health by tracking medical records, vaccinations, and appointments in one place. It allows pet owners and veterinarians to easily monitor and improve pet health through a simple web application and ML.
